WORK EXPERIENCE

Developer
SBSS CONSULTING LDA
November 2018 - March 2022

· Web page development with the main objective to illustrate all products available for sale. It contained login management, creation and user management, future sales planning and integration with management software.
· Several fully customizable web page developments for shop floor management, 100% integrated with a management software.
· Point of sale (POS) development (50+ stores) for the textile industry, 100% integrated with management software.
· The projects described above were produced from scratch and the integration with the management software was done using the Endpoint Rest service (c# or javascript). Data management between layers was done with the help of a database, (Microsoft SQL Server or SAP Hana Database), which contained procedures, functions and views for data processing and distribution.
· The projects mentioned above were duplicated and transformed to be hosted with Node.js technology, with database support (Microsoft SQL Server).
· The HTML5 framework (SAPUI5) was used to develop the project's frontend and jQuery to communicate with the Rest service.
· Development of various integration tools with online stores, for processing customers, products and sales orders (communications made with Rest api).
· Addon developments for business management software (SAP), with c# and visual basic languages.
· Development of reports for business management software (SAP), using the "Crystal Reports" tool.
