WORK EXPERIENCE

Software Developer

SBSS Consulting   November 2018 - March 2022

- Web page development with the main objective of illustrating all products available for sale. It included login management, user creation and user management, as well as future sales planning and integration with management software.
- Several fully customizable web page developments were created for shop floor management, with 100% integration with a management software.
- Point of sale (POS) development (50+ stores) in the textile industry, fully integrated with management software.
- The projects were built from scratch and integration with the management software was achieved using an endpoint Rest Service(either in c# or node.js).
- Data store was implemented using either Microsoft SQL Server or SAP Hana Database, which contained procedures, function and views for data processing and distribution.
- The html framework SAPUI5 was used to develop the fronted of the projects.
- Also worked on the development of various integration tools with online stores, specifically for processing customers, products and sales orders via Rest APIs.
- Additionally, created add-ons for business management software (SAP), using c# and visual basic languages.
- .Lastly, developed of reports for business management software (SAP), using the "Crystal Reports" tool.

Node.js Developer

Valerius HUB - June 2022 - March 2024   Redit - June 2022 - to Date

- Web page developed with the primary main of managing returns and incoming goods besides products management. Involving integration with online stores on platforms like Shopify and WooCommerce. Technologies used included Angular, Mysql, Node.js, Cloudinary and REST APIs.
- Returns Management System: Web page developed for managing returns, size exchanges and recycling of purchased products. Used React and Node.js to build responsive UI. Integrated with MySQL for efficient data storage and image handling using Cloudinary
- Logistics and Shipping Solution: Developed a mechanism for delivering and obtaining goods. Integrated with providers such as DHL, CTT and Inpost.
- Second-Hand Online Store (swyco.io): Developed an online marketplace for second-hand products. Centered around user management, profile settings, login, registration, items show case and items registration. Included wallet capabilities, a safe checkout process, a shopping cart, discounts/ promotions, email automation and labels automation. Technologies used included React, Tailwind, Mysql, Node.js, Cloudinary and REST APIs for carriers endpoints.
